Summary

Our Neutral rating on JPMorgan's shares is based on shareholder returns over the past year, driven by continued operational strength amid cost concerns and a weak asset quality. Business expansion initiatives (global and domestic), robust loan and deposit balance and changes in interest rates will support net interest income (NII) expansion. For 2026, the bank expects NII to increase by almost 9%. In investment banking (IB), the company's solid pipeline, market leadership and resilient advisory demand remain strengths, though capital markets volatility and weakness in the mortgage banking business are likely to weigh on non-interest income. Technology and marketing investments will keep expenses elevated. The company plans to allocate $19.8 billion toward tech initiatives in 2026. A tough macro backdrop raises concerns about asset quality.

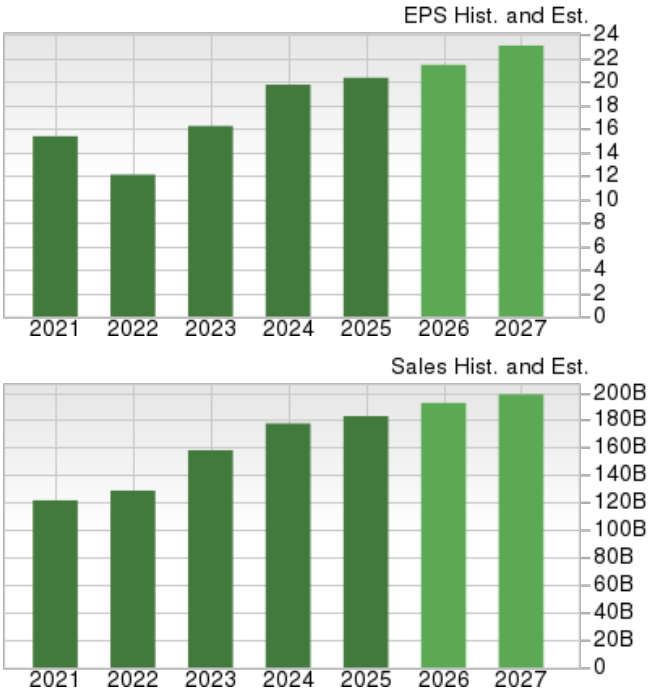
Overview

Headquartered in New York, JPMorgan Chase & Co. is one of the biggest global banks with assets worth $4.42 trillion and total stockholders' equity worth $362.4 billion as of Dec. 31, 2025. With operations in more than 60 countries, the company (incorporated under Delaware law in 1968) is one of the largest financial service firms globally.



As of 02/26/2026

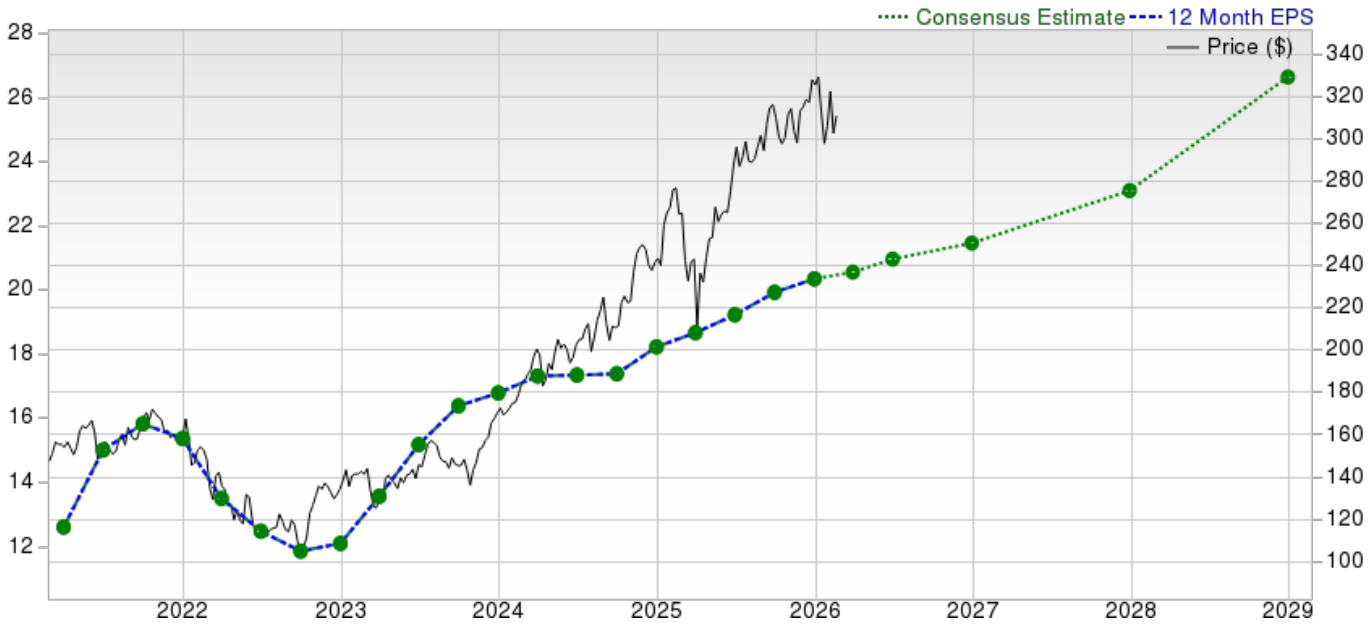
JPMorgan operates its business through the following four reportable segments:

The Consumer & Community Banking (CCB) segment (constituting 40.9% of total net revenues in 2025) serves consumers and businesses through personal service at bank branches and through automated teller machine (ATMs), online, as well as through mobile and telephone banking. CCB is organized into Consumer & Business Banking, Mortgage Banking, and Card & Auto.

The Commercial & Investment Bank (CIB) segment (42.2%) offers a wide range of IB, market-making, prime brokerage, and wholesale payments services to a global client base of corporations, investors, financial institutions, government and municipal entities. The segment also offers lending, wholesale payments, and investment banking services to corporations, municipalities, financial institutions and non-profit entities.

The Asset & Wealth Management (AWM) segment (13.1%) provides services to institutions, retail investors and high-net-worth individuals. It offers global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity including money market instruments and bank deposits. The segment also offers trust and estate, banking and brokerage services.

The Corporate segment (3.8%) consists of Treasury & Chief Investment Office (CIO) and Other Corporate, which includes corporate staff units and centrally managed expenses.



As of 02/26/2026

Reasons To Buy:

Decent NII growth, modest loan demand, strategic buyouts, business diversification initiatives, strong liquidity position and branch expansion will continue to support JPMorgan's financials.

- Though JPMorgan's NII declined in 2021 on near-zero interest rates, the metric witnessed a five-year (2020-2025) compound annual growth rate (CAGR) of 11.8%. This was largely driven by the acquisition of First Republic Bank in 2023 and the high-interest rate regime since 2022. Nonetheless, higher funding costs hurt the company's net yield on interest-earning assets in 2025 and 2024, with the metric declining to 2.50% from 2.63% in 2024 and 2.70% in 2023. The Federal Reserve has lowered interest rates, which will likely adversely impact the company's NII and net yield on interest-earning assets because of the asset-sensitive balance sheet. However, decent loan demand and solid economic growth are expected to support NII. The company expects NII to be roughly $104.5 billion for 2026 (up roughly 9% year over year), and net yield on interest-earning assets to stabilize gradually.

- JPMorgan is expanding its footprint in new regions despite the rise of mobile and online banking. The company is targeting to expand its affluent banking services and plans to open more than 500 new branches by 2027, with more than 160 across 30 states to be opened this year. This move will solidify its position as the bank with the largest branch network, covering all 48 U.S. states. The strategy aims to boost market share and seize cross-selling opportunities in cards and auto loans. The company is committed to renovating its existing locations by 2027 to serve its customers better. Apart from this, in 2021, the company launched its digital retail bank, Chase, in the U.K. and plans to expand the reach of its digital bank across the European Union (to open a digital bank in Germany by mid-2026). JPMorgan is also focused on bolstering the CIB and AWM businesses in China.

- Global deal-making came to a grinding halt at the beginning of 2022, mainly due to the Russia-Ukraine conflict, fears of economic slowdown and high inflation numbers, something JPMorgan wasn't immune to. Still, JPMorgan held its #1 global ranking for IB fees. Momentum returned in 2024, when total IB fees in the CIB segment jumped 36%. The year 2025 started strongly, but sentiment cooled after Trump's tariff measures were unveiled on "Liberation Day" in April. Activity has improved since then and the CIB segment's IB fees rose 7% in 2025, and JPMorgan captured an 8.4% wallet share. Looking ahead, a healthy pipeline, resilient M&A demand (as companies are seeking scale, cost synergies and technology capabilities to remain competitive) and JPMorgan's leadership position set it up for stronger IB fee growth as macro conditions become more supportive. Meanwhile, persistent macroeconomic and geopolitical uncertainty remains a key risk to the outlook.

- JPMorgan has been growing through bolt-on acquisitions, both domestic and international. In 2023, the company increased its stake in Brazil's C6 Bank to 46% from 40%, allied with Cleareye.ai (a financial technology firm focused on trade finance) and acquired Aumni and First Republic Bank (an FDIC-assisted deal). In 2022, it acquired Renovite, a 49% stake in Greece-based Viva Wallet and Global Shares. These deals, along with several others, are expected to keep supporting the bank's plan to diversify revenues and expand the fee income product suite and consumer bank digitally.

- JPMorgan remains focused on acquiring the industry's best deposit franchise and strengthening its loan portfolio. Despite a challenging operating environment, deposits and loan balances have remained strong over the past several years. As of Dec. 31, 2025, the loans-to-deposit ratio was 58%. With increasing clarity on several lingering matters, including tariff plans and the Fed's monetary policy, demand for loans (specifically wholesale loans and credit cards) is expected to be decent and improve gradually over time. The company will also be able to capitalize on its scale to record decent loan and deposit growth.

- JPMorgan has a solid balance sheet position. As of Dec. 31, 2025, the company had total debt of $500 billion (the majority of this is long-term in nature). The company's cash and due from banks and deposits with banks were $343.3 billion on the same date. The company maintains long-term issuer ratings A/AA-/A1 ratings from Standard and Poor's, Fitch Ratings and Moody's Investors Service, respectively. This allows the company easy access to the debt market. Given the favorable factors and earnings strength, it will be able to meet debt obligations in the near term even if the economic situation worsens.

- JPMorgan has a solid capital distribution plan. It cleared the 2025 stress test impressively and announced an increase in its quarterly dividend by 7% to $1.50 per share. In March 2025, the company raised its quarterly dividend by 12% to $1.40 per share, while in September 2024, it announced a 9% hike in the quarterly dividend to $1.25 per share. It also authorized a new share repurchase program worth $50 billion (effective July 1, 2025). As of Dec. 31, 2025, almost $33.8 billion in authorization remained available. Given a strong capital position and earnings strength, the company is expected to sustain current capital distributions.

- Shares of JPMorgan have underperformed the industry in the past six months. Estimates for the company's 2026 earnings have been revised 1.3% upward over the past seven days. Given the strength in fundamentals and positive estimate revision, the price performance is expected to improve in the near term.

Reasons To Sell:

Weakening asset quality, rising expenses and subdued mortgage income amid macroeconomic uncertainty will likely hurt JPMorgan. Higher reliance on capital markets to generate fee income is another woe.

- JPMorgan's overdependence on the performance of the capital markets to generate fee income has added volatility. Although the heightened volatility and rise in client activity during the pandemic period resulted in increased trading, there was a gradual normalization thereafter. The volatility is evident from markets revenue growth of 19% in 2025, 7.3% and 5.8% in 2024 and 2022, respectively, along with declines of 3.5% in 2023 and 7.1% in 2021. The tariff-related uncertainty, macroeconomic ambiguity and geopolitical uncertainty remain major factors driving volatility and are likely to support markets revenues. As such, volatility is not necessarily bad for this business, although it makes forecasting difficult.

- As mortgage rates remained high in 2022 and 2023, JPMorgan's mortgage fees and related income performance turned dismal. With the demand for mortgage loans and refinancing steadily declining, the metric recorded a negative CAGR of 14.9% over the five years ended 2025. Though mortgage rates have declined massively from the highs witnessed in the previous years, origination volumes and refinancing activities are less likely to witness solid improvement as affordability challenges will undeniably take a toll on them. Hence, JPMorgan's mortgage fees and related income are less likely to record solid growth in the near term.

- JPMorgan's asset quality has been deteriorating. While the company recorded negative provisions in 2021, a substantial jump in provisions was recorded in the years after that because of the worsening macroeconomic outlook. The metric surged 169% in 2022, 46% in 2023, 15% in 2024 and 33% in 2025. The 2025 number included a forward provision related to the planned Apple credit card buyout. Though interest rates have declined, an overall dismal operating backdrop is expected to hurt borrowers' credit profiles. Management sounded a cautious note about the potential for credit profile deterioration due to softer labor markets and economic and geopolitical uncertainty. Hence, the company's asset quality is likely to remain subdued in the near-term.

- Steadily rising operating expenses pose a concern for JPMorgan. The company's non-interest expenses witnessed a five-year (ended 2025) CAGR of 7.5%. This included the FDIC special assessment charge of $2.9 billion incurred in 2023. As the company continues with branch expansion and technology upgrade efforts, expenses will stay high. Its strategic bolt-on acquisitions will keep cash demands elevated. The company projects total expenses in 2026 to rise by more than $9 billion to $105 billion, with tech-related spending to be $19.8 billion.

Last Earnings Report

JPMorgan's Q4 Earnings Beat Estimates on Solid Trading & NII, Weak IB Hurts

FY Quarter Ending	12/31/2025
Earnings Reporting Date	Jan 13, 2026
Sales Surprise	0.23%
EPS Surprise	6.30%
Quarterly EPS	5.23
Annual EPS (TTM)	20.33

Impressive trading performance and higher NII drove JPMorgan's adjusted fourth-quarter 2025 earnings of $5.23 per share. The bottom line handily surpassed the Zacks Consensus Estimate of $5.01.

Markets revenues were impressive and exceeded management's expectations of growth in the low-teens percentage rate. The metric soared 17% to $8.2 billion. Specifically, fixed-income markets revenues rose 7% to $5.38 billion, while equity markets revenues jumped 40% to $2.86 billion.

However, the IB business performance was weaker than expected by management. Advisory fees declined 3%, while debt and equity underwriting fees fell 16% and 2%, respectively. Thus, total IB fees (in the CIB segment) were down 5% from the prior-year quarter to $2.35 billion. The company had projected IB fees to be up in the low single digits during the quarter.

The company recorded an increase in NII, driven by higher yields and 11% year-over-year jump in total loans. Among other positives, CCB average loan balances were up 1% year over year. Also, debit and credit card sales volume increased 7%. On the other hand, mortgage fees and related income fell 5% to $357 million.

During the quarter, operating expenses rose. Also, provisions increased during the quarter.

Revenues Rise, Expenses Up

Net revenues, as reported, were $45.79 billion, up 7% year over year. The top line outpaced the Zacks Consensus Estimate of $45.69 billion.

NII rose 7% year over year to $25 billion. Non-interest income also grew 7% to $20.8 billion.

Non-interest expenses (on a managed basis) were $23.98 billion, up 5% year over year. This was mainly due to higher compensation expenses, brokerage expense and distribution fees, marketing costs, occupancy expenses and auto lease depreciation, partly offset by the release of the FDIC special assessment accrual.

The performance of JPMorgan's business segments, in terms of net income generation, was decent. The CIB and Asset & Wealth Management witnessed a rise in net income on a year-over-year basis. On the other hand, the CCB and Corporate segments recorded a fall in net income.

Results in the reported quarter excluded $2.2 billion of credit reserve established for the forward purchase commitment of the Apple credit card portfolio. After considering this, net income declined 7% to $13.03 billion.

Credit Quality Weak

Provision for credit losses was $4.66 billion, soaring 77% from the prior-year quarter. This included the above-mentioned provision for the Apple credit card portfolio.

Net charge-offs (NCOs) increased 5% to $2.51 billion. Also, as of Dec. 31, 2025, non-performing assets (NPAs) were $10.36 billion, surging 11%.

Capital Position Solid

Tier 1 capital ratio (estimated) was 15.5% at the fourth-quarter end, down from 16.8% in the prior-year quarter. Tier 1 common equity capital ratio (estimated) was 14.5%, down from 15.7%. Total capital ratio was 17.3% (estimated) compared with 18.5% a year ago.

Book value per share was $126.99 as of Dec. 31, 2025, compared with $116.07 a year ago. Tangible book value per common share was $107.56 at the end of December 2025, up from $97.30.

Update on Share Repurchases

During the reported quarter, JPMorgan repurchased 26.7 million shares for $7.9 billion.

2026 Outlook

Management now expects NII to be almost $104.5 billion for this year, up almost 9% from $95.9 billion in 2025. Further, the company projects NII excluding Markets to be nearly $95 billion, driven by continued loan growth in Cards and modest deposit growth, partially offset by the impact of lower rates (assumes two rate cuts).

Card loan growth is anticipated to be 6-7%. The company expects modest deposit growth.

Management expects adjusted non-interest expense to be $105 billion for this year, up from $96 billion in 2025. The jump will likely be primarily due to an increase in growth and volume-related spending (like compensation costs, costs for branching/expansion and costs related to credit card business growth), along with an increase in expenses related to investments in technology and AI. The company plans to allocate $19.8 billion toward tech initiatives in 2026, a 10% increase from the prior year. Apart from these, structural inflation-related costs like higher real estate and general operating overhead expenses will result in a rise in overall firm-wide expenses.

Additionally, JPMorgan expects card service NCO rate to be roughly 3.4% “on favorable delinquency trends driven by the continued resilience of the consumer.”

Management expects IB fees to rise in the mid-teen percentage in the first quarter of 2026, potentially trending toward the high teens. Further, markets revenues are projected to grow in the mid-teen range as well, supported by elevated volumes during bouts of volatility.

Recent News

JPMorgan to Take Over Apple Card, to Record a $2.2B Provision in Q4 – Jan. 7, 2026

JPMorgan announced that it will become the new issuer of Apple Card, replacing Goldman Sachs. The transition is expected to be completed in approximately 24 months, subject to customary regulatory approvals.

JPMorgan expects to recognize a $2.2 billion provision for credit losses in the fourth quarter of 2025 related to the forward purchase commitment of the Apple Card portfolio. While the transaction will not close for roughly two years, the provision reflects prudent balance sheet positioning ahead of the portfolio transfer.

Under the terms of the agreement, the company will acquire the Apple Card loan portfolio, which is estimated to bring over $20 billion in card balances onto JPMorgan's Chase platform once the transition is finalized.

Apple Card was introduced in 2019 in partnership with Goldman, marking the latter's entry into the consumer credit card space. In 2023, Goldman signaled its intention to exit the partnership amid mounting losses in its consumer banking business.

In late 2023, Apple reportedly explored options to transition the program to a new issuer, with JPMorgan emerging as a natural successor given its existing relationship with Apple through Apple Pay and its large transaction presence at Apple retail outlets.

Rationale Behind JPMorgan's Apple Card Agreement

The agreement strengthens JPMorgan's position in the U.S. credit card market by expanding its co-brand portfolio and adding scale to its consumer payments business. By onboarding a large, established cardholder base, the company is expected to accelerate card transaction volumes and expand its U.S. consumer reach.

Allison Beer, chief executive officer of Card & Connected Commerce at JPMorgan Chase, stated, "Apple is an iconic brand recognized globally for its innovation, design excellence and commitment to delivering exceptional customer experiences." Beer further added, "We share a commitment to supporting consumer financial health, and we're proud to deepen our relationship by welcoming them as the newest partner in our industry-leading co-brand credit card program. We're excited to innovate together in the future."

JPMorgan's card segment has been witnessing steady growth over the past few years, adding millions of new accounts annually, increasing customer engagement and broadening product offerings across consumer and business segments. The addition of the Apple Card portfolio further enhances this momentum, bringing a sizable and strategically valuable base of customers and balances that reinforce the company's long-term growth trajectory in cards.

Dividend Update

On Dec. 9, 2025, JPMorgan announced a quarterly cash dividend of $1.50 per share. The dividend was paid out on Jan. 31, 2026, to stockholders of record at the close of business on Jan. 6.

Valuation

JPMorgan's shares are up 1.7% in the past six months and 15.7% over the trailing 12-month period. Stocks in the Zacks sub-industry are up 6.6% in the past six months while those in the Zacks Finance sector are up 4.7%. Over the past year, the Zacks sub-industry is up 22.5% and the sector is up 14.1%.

The S&P 500 index is up 8.1% in the past six-month period and 20.7% in the past year.

The stock is currently trading at 14.10X forward 12 months earnings, which compares to 13.90X for the Zacks sub-industry, 16.53X for the Zacks sector and 22.72X for the S&P 500 index.

Over the past five years, the stock has traded as high as 16.08X and as low as 8.08X, with a 5-year median of 12.32X. Our Neutral recommendation indicates that the stock will perform in line with the market. Our $322 price target reflects 14.83X forward earnings.

Zacks Stock Rating System

We offer two rating systems that take into account investors' holding horizons: Zacks Rank and Zacks Recommendation. Each provides valuable insights into the future profitability of the stock and can be used separately or in combination with each other depending on your investment style.

Zacks Recommendation

The Zacks Recommendation aims to predict performance over the next 6 to 12 months. The foundation for the quantitatively determined Zacks Recommendation is trends in the company's estimate revisions and earnings outlook. The Zacks Recommendation is broken down into 3 Levels; Outperform, Neutral and Underperform. Unlike many Wall Street firms, we have an excellent balance between the number of Outperform and Neutral recommendations. Our team of 70 analysts are fully versed in the benefits of earnings estimate revisions and how that is harnessed through the Zacks quantitative rating system. But we have given our analysts the ability to override the Zacks Recommendation for the 1200 stocks that they follow. The reason for the analyst over-rides is that there are often factors such as valuation, industry conditions and management effectiveness that a trained investment professional can spot better than a quantitative model.

Zacks Rank

The Zacks Rank is our short-term rating system that is most effective over the one- to three-month holding horizon. The underlying driver for the quantitatively-determined Zacks Rank is the same as the Zacks Recommendation, and reflects trends in earnings estimate revisions.

Zacks Style Scores

The Zacks Style Score is as a complementary indicator to the Zacks rating system, giving investors a way to focus on the highest rated stocks that best fit their own stock picking preferences.

Academic research has proven that stocks with the best Value, Growth and Momentum characteristics outperform the market. The Zacks Style Scores rate stocks on each of these individual styles and assigns a rating of A, B, C, D and F. We also produce the VGM Score (V for Value, G for Growth and M for Momentum), which combines the weighted average of the individual Style Scores into one score. This is perfectly suited for those who want their stocks to have the best scores across the board.

Value Score	C
Growth Score	C
Momentum Score	A
VGM Score	B

As an investor, you want to buy stocks with the highest probability of success. That means buying stocks with a Zacks Recommendation of Outperform, which also has a Style Score of an A or a B.

Disclosures

This report contains independent commentary to be used for informational purposes only. The analysts contributing to this report do not hold any shares of this stock. The analysts contributing to this report do not serve on the board of the company that issued this stock.
