Analysis prepared by **Angelo Zino, CFA** on Jan 29, 2026 06:05 AM ET, when the stock traded at **USD 449.18**.

Highlights

- We expect sales growth of 16% in FY 26 (Jun.) and 15% in FY 27, on momentum for Microsoft 365 Commercial Cloud (+17% in Dec-Q) and Azure (+39% vs. our 37% forecast). AI is fueling growth across MSFT's ecosystem, with commercial bookings up 230% led by OpenAI's $250B Azure commitment. Copilot seat additions rose 160% to 15M paid seats, GitHub Copilot grew 75% to 4.7M subscribers, and Fabric reached a $2B annual run rate. We see Azure sustaining 35% growth through FY 27 as AI workloads gain momentum.
- Operating margins expanded to 47.1% in Dec-Q from 45.5% in the prior year, demonstrating disciplined cost management despite elevated capex spend. We forecast operating margins in the mid-40s range through FY 27, pressured by rising depreciation expenses. The company returned $12.7B to shareholders, reflecting strong cash generation.
- We increase our FY 26 EPS estimate to $16.17 from $15.70 and FY 27 to $18.89 from $18.31. GAAP EPS of $5.16 in Dec-Q included $7.6B net gains from OpenAI investments, while adjusted EPS of $4.14 beat consensus. We look for FCF of +$70B in FY 26 and +$80B in FY 27. OpenAI's restructuring provides clarity, valuing MSFT's stake at $135B.

Investment Rationale/Risk

- Our Strong Buy view is based on AI opportunities, as MSFT is riding investment with its complete AI stack, from infrastructure to development services like Azure AI and applications like Microsoft Copilot. We see diverse ways MSFT will monetize generative AI (cloud, Copilots, OpenAI, Search expansion), creating upside potential to out-year expectations. MSFT will reap scale efficiencies through cloud adoption and higher gaming growth potential. Copilot as organizing layer creates moats by integrating with third-party agents.
- Risks include slower-than-anticipated AI adoption relative to capital spending plans, which could negatively impact earnings. Rising costs could pressure profitability during compute oversupply periods. Customer concentration risk has emerged with 45% of commercial RPO tied to OpenAI, potentially stoking investor concerns despite the $250B commitment. Competitive pressures and challenging seat growth could impact the subscription model.
- We cut our 12-month target to $550 from $620, on 27x our CY 27 view of $20.55, below historical averages of 31x given elevated capex/OpenAI concentration. Our DCF supports our target using a beta of 1.0, terminal growth of

Analyst's Risk Assessment

LOW	MEDIUM	HIGH

Our risk assessment balances our view of the company's leading global franchises – Windows, Office, SQL-Server, Xbox, and LinkedIn – and considerable growth and success in cloud with "365" applications and Azure, as well as its balance-sheet strength, with challenges related to PC growth, disruption from mobile computing, and MSFT's sheer size and the "law of large numbers" problem.

Microsoft Corporation

Business Summary Jan 29, 2026

Corporate Overview. Microsoft Corporation (MSFT) was co-founded by Bill Gates and Paul Allen in 1975 and initially built and sold meta-software, specifically apps and tools used to develop software running on an emerging class of "microprocessors." The company offers an array of services, including cloud-based solutions that provide customers with software, services, platforms, and content, as well as solution support and consulting services. MSFT also delivers online advertising. The company's products include operating systems, cross-device productivity and collaboration applications, server applications, business solution applications, desktop and server management tools, software development tools, and video games. The company also designs and sells devices, including PCs, tablets, gaming and entertainment consoles, other intelligent devices, and related accessories.

The company operates through three segments: Productivity and Business Processes, Intelligent Cloud, and More Personal Computing.

Productivity and Business Processes (42% of Dec-Q revenue) consists of products and services in MSFT's portfolio of productivity, communication, and information services, spanning a variety of devices and platforms. This segment primarily comprises Office Commercial (Office 365 subscriptions, the Office 365 portion of Microsoft 365 Commercial subscriptions, and Office licensed on-premises), comprising Office, Exchange, SharePoint, Microsoft Teams, Office 365 Security and Compliance, and Microsoft Viva. On the Office Consumer side, MSFT sells Microsoft 365 Consumer subscriptions, Office licensed on-premises, and other Office services. The segment also includes LinkedIn and Dynamics 365.

Intelligent Cloud (40% of Dec-Q revenue) consists of the company's public, private, and hybrid server products and cloud services that can power modern businesses and developers. This segment primarily comprises Azure and other cloud services, SQL Server, Windows Server, Visual Studio, System Center, related Client Access Licenses (CALs), and Nuance. Enterprise Services includes Enterprise Support Services and Microsoft Consulting Services.

More Personal Computing (18% of Dec-Q sales) consists of Windows (including Windows OEM licensing), devices like Surface and PC accessories, gaming (e.g., Xbox hardware/content, Game Pass, and other subscriptions), Search, and news advertising.

Impact of Major Developments. In late August 2024, MSFT made several key segment changes to better align its businesses, primarily bringing revenue from the commercial components of Microsoft 365 together into the Productivity and Business Processes (PBP) segment. This new category combines three businesses: 1. Office Commercial products and cloud services (already in PBP), 2. Enterprise Mobility and Security and Power BI per user (taken from Azure); and 3. Windows Commercial products and cloud services (taken from Windows). MSFT's decision to restate certain businesses may create some confusion and does naturally inflate Azure growth figures.

On October 13, 2023, MSFT completed its $75B acquisition of Activision Blizzard (ATVI) after the U.K.'s Competition and Markets Authority (CMA) said the deal no longer poses a competitive risk to the high-growth potential cloud gaming market. MSFT agreed to give up cloud streaming rights (excluding EU) to Ubisoft to get the needed approval from the CMA.

AI Initiatives. MSFT will be able to capture significant AI sales by leveraging new capabilities across its software platforms (e.g., Office 365) as well as the natural benefits from its cloud business. While OpenAI is being used across MSFT's products, OpenAI APIs have broad implications as they are being run on Azure and capturing revenue from tens of thousands of companies that may not be direct clients. MSFT can monetize AI-related revenue more quickly than any other cloud/software provider, as companies big and small will look to its infrastructure for a host of AI purposes (training their own models, running an open-source model, or making API calls into one of the big frontier models that MSFT has built with OpenAI). Rolling out greater productivity tools via Copilot, as well as incremental share gain through Bing, are additional ways that AI can become a bigger contributor to MSFT's total revenue.

Leadership. In 2014, Satya Nadella became MSFT's third CEO, taking over from Steve Ballmer. Nadella articulated a company mantra of "mobile-first, cloud-first," though it appears now that he only meant the second part. Soon after taking over, he invested more heavily in Azure, which evolved quickly to be competitive with Amazon AWS in both the Infrastructure-as-a-Service (IaaS) and Platform-as-a-Service (PaaS) categories.

Financial Trends. The impact of MSFT's cloud transition on overall revenue started with annual revenue growth rates of 7.8% (2015), -1.7% (2016), and 5.1% (2017), reflecting the initial headwind usually encountered in the shift from a legacy model with large up-front sales of software installed and operated on the customer's premises to one based on cloud delivery and subscription billing. Revenue growth hit 14% per year in each of the next three years, accelerating further to 18% in both 2021 and 2022 due to a cloud shift tailwind. Revenue growth decelerated to a 6.9% pace in FY 23 (Jun.), given extremely difficult comparisons in a post-pandemic environment and a more challenging macroeconomic backdrop. That said, top-line growth returned to a double-digit growth pace in FY 24 and FY 25, growing 16% and 15%, respectively. We expect a 10%-plus pace to be sustained on greater generative AI adoption.

We note capacity constraints in Dec-Q of 2025 that are likely to persist through FY 27, as MSFT increasingly pivots spending back toward PP&E (of cloud and AI capex, more than half is currently in long-lived assets), which will allow it to better manage capex spend to AI revenue. MSFT's capex including leases, most of which go toward building AI data centers, totaled $37.5B in Dec-Q, up 66% year-over-year, and we expect it will grow for the foreseeable future (capex growth in FY 26 to exceed FY 25).

Microsoft Corporation

Sub-Industry Outlook

CFRA has a positive fundamental outlook on the Systems Software sub-industry over the next 12 months, supported by a broadly healthy global economy and robust IT budgets focused on AI and automation initiatives. Expectations for further Fed rate cuts in 2026 also bolster our outlook for a broadening of spending across industries and businesses of all sizes. We expect AI-related investments to be a major pillar of top-line growth in 2026 for the Systems Software industry, as the AI revolution enters its fourth year.

While the AI disruption narrative has weighed significantly on investor sentiment for Application Software firms, we believe Systems Software companies have held up better by comparison. Large cloud providers like Microsoft (MSFT) and Oracle (ORCL) continue to demonstrate robust demand for cloud compute services and their infrastructure offerings. MSFT saw stronger-than-anticipated cloud revenues in the Sep-Q – Azure sales accelerated to 40% Y/Y, driven by cloud migrations, improved capacity, and higher consumption of AI services. Other hyperscalers and cloud providers such as Alphabet (GOOGL) and Amazon.com (AMZN) also reported strong cloud infrastructure growth, benefiting from customers building, deploying, and scaling their AI applications. That said, ORCL faces a unique set of challenges ahead, as it needs to demonstrate that it can convert its backlog to revenue while managing its high debt load and profitability. ORCL's reliance on OpenAI to sustain demand also poses concentration risks amid a more competitive backdrop among LLM providers.

For cybersecurity firms, AI proliferation creates enduring tailwinds for derivative beneficiaries in cybersecurity. With more workloads deployed in the cloud, greater use of agentic solutions, and more applications being developed, vulnerabilities have risen in the run-time environment. The number of human and non-human identities is poised to increase by 90x from AI, necessitating advanced identity solutions (e.g., Privileged Access Management or PAM, Identity Access Management or IAM, and agent management) to prevent breaches and application misuse. Cloud and network security solutions require next-generation threat identification technologies to identify, alert, and remediate expeditiously. Additionally, with the security burden and work volumes increasing for security teams, the use of AI security agents is on the horizon to alleviate and automate tasks. Together, we see multiple opportunities for AI to drive greater demand for security solutions. Most cybersecurity firms have either a workload/device-based pricing component or adopt a hybrid pricing model, making them more resilient to the disruption narrative hurting seat-based software vendors.

Software businesses continue to manage costs judiciously, focusing on optimizing operational expenses through greater use of AI for automation and productivity improvements. We forecast margins to remain healthy as firms continue to achieve greater efficiencies while ensuring appropriate levels of expenses for innovation and sales capacity increases. Consensus estimates for the software industry for companies in the S&P 500 currently project revenue growth to rise to 15% in 2026, while operating margin expectations hold steady at 43%.

Analyst Research Notes and other Company News

January 29, 2026
06:05 AM ET... CFRA Maintains Strong Buy Opinion on Shares of Microsoft Corporation (MSFT 449.18*****):
We cut our target to $550 from $620, on a lower revised P/E of about 27x our CY 27 view of $20.55. We increase our FY 26 (Jun.) EPS estimate to $16.17 from $15.70 and FY 27 to $18.89 from $18.31. Despite the lower share price post earnings, we view the Dec-Q results as solid across both MSFT's Productivity Processes and Azure businesses, with guidance looking for Azure to sustain a 37%-38% growth pace on tougher comparisons (some likely wanted more). Cloud gross margin was guided to compress more than we thought for the Mar-Q (down to 65% from 67% in Dec-Q) while OpenAI concentration (45% of RPO) may concern some (RPO excluding OpenAI still grew a healthy 28%). Still, we are encouraged by Copilot momentum with seat additions rising 160% Y/Y (now 15M paid seats), DAUs increasing 10x, and number of large customers over 35k seats tripling. Developer and Data Platform growth also impressed, with GitHub Copilot subscribers +75% Y/Y (4.7M) and data analytics platform Fabric now at a +$2B ARR (sales +60% Y/Y). / Angelo Zino, CFA

January 28, 2026
05:04 PM ET... MSFT: Delivers Dec-Q Beat and Massive Bookings Growth; OpenAI Exposure Rises (MSFT 470.28*****):
MSFT delivered a Dec-Q beat with revenue of $81.3B (+17% Y/Y vs. 15% forecast) and adjusted EPS of $4.14 (+24% vs. $3.92 consensus), though GAAP EPS of $5.16 was boosted by $7.6B in OpenAI investment gains. Commercial remaining performance obligation surged 110% to $625B, driven largely by OpenAI's $250B cloud commitment, though we note this creates significant customer concentration risk with 45% of RPO now tied to OpenAI. Azure delivered strong 39% growth, beating our 37% forecast and largely in line with consensus, while Productivity and Business Processes grew 16% to $34.1B (beating our 14% growth forecast), with Microsoft 365 Commercial up 17%. Operating margins expanded to 47.1% from 45.5%, demonstrating continued operational leverage. We believe the robust enterprise demand for multi-year cloud contracts and sustained Azure growth momentum position MSFT well to capitalize on AI transformation across enterprise markets. MSFT will provide detailed guidance on the earnings call. / Angelo Zino, CFA

December 03, 2025
02:31 PM ET... MSFT Denies Missed AI Target; CFRA Maintains Strong Buy Rating (MSFT 481.64*****):
Shares of MSFT are down today (partly recovered) following a report from The Information claiming the company reduced AI sales targets after salespeople missed goals, suggesting customer resistance to premium-priced AI offerings. We believe the report is at the heart of the debate surrounding SaaS trends and the longer-term time horizon to generate revenue for AI tools. More competitive pressures and challenging seat growth across the enterprise space (impacting the core subscription model), coupled with slower AI adoption for MSFT's productivity tools, are risks. Still, a CNBC report cites that MSFT disputed the report, with a spokesperson calling it inaccurate and stating MSFT had not lowered aggregate AI sales quotas or targets. We maintain a positive view of the MSFT story, as we see successful monetization of its AI investments over time. We also believe Azure's growth is likely to sustain a rate of at least mid-30% through CY 26. In our view, valuation is compelling, at 24x CY 27 EPS. / Angelo Zino, CFA

October 30, 2025
06:56 AM ET... CFRA Maintains Strong Buy Opinion on Shares of Microsoft Corporation (MSFT 541.55*****):
We keep our 12-month target price at $620, on a P/E of 31.1x our CY 27 view of $19.93, near its five-year historical forward average. After posting better-than-expected Sep-Q results, we increase our FY 26 (Jun.) EPS estimate to $15.70 from $15.36 and FY 27 to $18.31 from $17.96. We believe the lackluster share price response reflects MSFT's comments that capex will now accelerate in FY 26 (previously cited a moderation), but appears warranted as bookings are rising at an impressive clip and AI demand outstrips supply. Commercial bookings grew +112% while commercial RPO rose 51% to nearly $400B at an average duration of two years (tied to near-term demand, not speculative long-term contracts). We expect Azure to sustain an elevated high-30's growth pace (37% seen in Dec-Q vs. 40% in Sep-Q). We believe that MSFT continues to focus on maximizing its capacity use, focusing on the best tokens per dollar per watt across Copilots to third-party enterprises and AI natives, with ARPU upside across its installed base. / Angelo Zino, CFA

October 29, 2025
05:30 PM ET... MSFT: Sep-Q Results Solid as Azure Beats With 40% Growth (MSFT 542.07*****):
MSFT posted Sep-Q adjusted EPS of $4.13 vs $3.37 prior year, beating $3.66 consensus, with revenue of $77.7B up 18% and exceeding our 15% forecast. Operating margin improved to 49% from 47% with operating income expanding 24% to $38.0B, demonstrating strong operational leverage. We continue to like margin execution and disciplined cost management as key drivers supporting our investment thesis. Azure led growth with 40% expansion, beating our 37% forecast and reflecting increasing enterprise cloud migration and AI demand. Commercial remaining performance obligation of $392B, up 51%, provides strong revenue visibility reflecting multi-year enterprise contracts. We believe the acceleration in cloud and AI services positions MSFT well for sustained growth. Operating cash flow surged 32% to $45.1B, providing significant financial flexibility for continued AI investments. MSFT typically provides forward guidance on the call and we will update our views thereafter. / Angelo Zino, CFA

October 28, 2025
12:45 PM ET... MSFT Gets Clarity from OpenAI Corporate Restructuring; CFRA Retains Strong Buy (MSFT 543.30*****):
OpenAI completed its corporate restructuring, converting to a public benefit corporation structure that values MSFT's 27% stake at $135B. The deal extends MSFT's exclusive IP rights to OpenAI models through 2032, including post-AGI technology, while securing $250B in additional Azure revenue commitments. MSFT also gains flexibility to independently pursue AGI development or partner with third parties (e.g., Anthropic), while maintaining its position as OpenAI's primary model partner despite losing exclusive compute provider rights. The restructuring resolves governance uncertainties and a more clear operational framework. We believe this balanced approach strengthens MSFT's AI positioning by securing long-term technology access while reducing dependency risks through diversified partnerships. The massive Azure commitment provides predictable revenue growth in the competitive AI infrastructure market while MSFT also continues to participate in the success of OpenAI through its large equity position. / Angelo Zino, CFA

July 31, 2025
12:00 PM ET... CFRA Maintains Strong Buy Opinion on Shares of Microsoft Corp. (MSFT 535.82*****):
We raise our 12-month target to $620 from $550, on a P/E of 33x our CY 2027 view of $18.73, above historical given our view of growth prospects tied to AI monetization. After posting better-than-expected Jun-Q results, we increase our FY 26 (Jun.) EPS estimate to $15.36 from $14.93 and FY 27 to $17.96 from $17.40. We are incredibly impressed by Azure growth acceleration, which we think is being partly attributed by greater usage of more complex reasoning models, as well as AI momentum across its productivity businesses given the increasing adoption that MSFT is seeing for its CoPilot tools across the enterprise space. In addition, similar to META, the company is executing extremely well on margins, as it looks to minimize headcount additions in favor of capex growth. Despite higher capex spend for Sep-Q ($30B), we expect the ROI of AI spend to improve through CY 2027, with greater revenue potential as MSFT shifts a greater allocation of spend toward servers. We view our forward estimates as conservative. / Angelo Zino, CFA

Glossary

STARS

Since January 1, 1987, CFRA Equity and Fund Research Services, and its predecessor S&P Capital IQ Equity Research has ranked a universe of U.S. common stocks, ADRs (American Depositary Receipts), and ADSs (American Depositary Shares) based on a given equity's potential for future performance. Similarly, we have ranked Asian and European equities since June 30, 2002. Under proprietary STARS (Stock Appreciation Ranking System), equity analysts rank equities according to their individual forecast of an equity's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (MSCI AC Asia Pacific Index, MSCI AC Europe Index or S&P 500® Index)), based on a 12-month time horizon. STARS was designed to help investors looking to put their investment decisions in perspective. Data used to assist in determining the STARS ranking may be the result of the analyst's own models as well as internal proprietary models resulting from dynamic data inputs.

S&P Global Market Intelligence's Quality Ranking

(also known as **S&P Capital IQ Earnings & Dividend Rankings**) - Growth and S&P Capital IQ Earnings & Dividend Rankings stability of earnings and dividends are deemed key elements in establishing S&P Global Market Intelligence's earnings and dividend rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B	Below Average
A	High	B-	Lower
A	Above	C	Lowest
B+	Average	D	In Reorganization
NC	Not Ranked		

EPS Estimates

CFRA's earnings per share (EPS) estimates reflect analyst projections of future EPS from continuing operations, and generally exclude various items that are viewed as special, non-recurring, or extraordinary. Also, EPS estimates reflect either forecasts of equity analysts; or, the consensus (average) EPS estimate, which are independently compiled by S&P Global Market Intelligence, a data provider to CFRA. Among the items typically excluded from EPS estimates are asset sale gains; impairment, restructuring or merger-related charges; legal and insurance settlements; in process research and development expenses; gains or losses on the extinguishment of debt; the cumulative effect of accounting changes; and earnings related to operations that have been classified by the company as discontinued. The inclusion of some items, such as stock option expense and recurring types of other charges, may vary, and depend on such factors as industry practice, analyst judgment, and the extent to which some types of data is disclosed by companies.

12-Month Target Price

The equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics.

Abbreviations Used in Equity Research Reports

CAGR - Compound Annual Growth Rate
CAPEX - Capital Expenditures
CY - Calendar Year
DCF - Discounted Cash Flow
DDM - Dividend Discount Model
EBIT - Earnings Before Interest and Taxes
EBITDA - Earnings Before Interest, Taxes, Depreciation & Amortization
EPS - Earnings Per Share
EV - Enterprise Value
FCF - Free Cash Flow
FFO - Funds From Operations
FY - Fiscal Year
P/E - Price/Earnings
P/NAV - Price to Net Asset Value
PEG Ratio - P/E-to-Growth Ratio
PV - Present Value
R&D - Research & Development
ROCE - Return on Capital Employed
ROE Return on Equity
ROI - Return on Investment
ROIC - Return on Invested Capital
ROA - Return on Assets
SG&A - Selling, General & Administrative Expenses
SOTP - Sum-of-The-Parts
WACC - Weighted Average Cost of Capital

Dividends on American Depository Receipts (ADRs) and American Depository Shares (ADSs) are net of taxes (paid in the country of origin).

Qualitative Risk Assessment

Reflects an equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices. For an ETF this reflects on a capitalization-weighted basis, the average qualitative risk assessment assigned to holdings of the fund.

STARS Ranking system and definition:

★★★★★ **5-STARS (Strong Buy):**
Total return is expected to outperform the total return of a relevant benchmark, by a notable margin over the coming 12 months, with shares rising in price on an absolute basis.

★★★★☆ **4-STARS (Buy):**
Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months.

★★★☆☆ **3-STARS (Hold):**
Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months.

★★☆☆☆ **2-STARS (Sell):**
Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months.

★☆☆☆☆ **1-STAR (Strong Sell):**
Total return is expected to underperform the total return of a relevant benchmark by a notable margin over the coming 12 months, with shares falling in price on an absolute basis.

Relevant benchmarks:
In North America, the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are the MSCI AC Europe Index and the MSCI AC Asia Pacific Index, respectively.

Disclosures

Stocks are ranked in accordance with the following ranking methodologies:

STARS Stock Reports:

Qualitative STARS rankings are determined and assigned by equity analysts. For reports containing STARS rankings refer to the Glossary section of the report for detailed methodology and the definition of STARS rankings.

Quantitative Stock Reports:

Quantitative rankings are determined by ranking a universe of common stocks based on 5 measures or model categories: Valuation, Quality, Growth, Street Sentiment, and Price Momentum. In the U.S., a sixth sub-category for Financial Health will also be displayed. Percentile scores are used to compare each company to all other companies in the same universe for each model category. The five (six) model category scores are then weighted and rolled up into a single percentile ranking for that company. For reports containing quantitative rankings refer to the Glossary section seof the report for detailed methodology and the definition of Quantitative rankings.

STARS Stock Reports and Quantitative Stock Reports:

The methodologies used in STARS Stock Reports and Quantitative Stock Reports (collectively, the "Research Reports") reflect different criteria, assumptions and analytical methods and may have differing rankings. The methodologies and data used to generate the different types of Research Reports are believed by the author and distributor reasonable and appropriate. Generally, CFRA does not generate reports with different ranking methodologies for the same issuer. However, in the event that different methodologies or data are used on the analysis of an issuer, the methodologies may lead to different views on the issuer, which may at times result in contradicting assessments of an issuer. CFRA reserves the right to alter, replace or vary models, methodologies or assumptions from time to time and without notice to clients.
